

## Bulletin of the American Institute of Mining Engineers Volume 31-36

This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1909 Excerpt: ...the fact that a portion of the sulphur dioxide formed by the oxidation of the sulphur is raised to sulphur trioxide by contact with incandescent ferric oxide. At the United States Smelting Works, in Utah, provision for protecting the bag-house from sulphur trioxide is made by blowing into the flues zinc oxide, which immediately absorbs the sulphur trioxide present to such an extent that it has been found quite possible to use cotton bags. The bag-house has proved very efficient in recovering fume from lead-refineries and all lead-smelting operations excepting roasting. In large copper-smelting plants, where large volumes of gas are produced carrying a sufficient amount of sulphur trioxide to destroy woven fabrics, three systems are in use--namely: radiation, decreased velocity, and friction--and in many cases two or more of these methods are combined. At the Washoe plant, in Anaconda, long steel-covered flues of enormous cross-section have been installed for a number of years, and, while this system does not effect a complete recovery of the fumes, it is as nearly perfect as it is possible to make a plant to-day. At Great Falls, Mont., the Boston & Montana Co. is installing the friction system at a cost exceeding \$1,000,000, which includes the construction of a stack 506 ft. high and 56 ft. in diameter and a dust-chamber in the flue-system, of such width that the furnace-gases will pass through it at a velocity considerably less than 500 ft. per minute. From the roof of this flue-chamber more than a million steel wires will be suspended, an arrangement which experiment has shown to increase greatly the settling-efficiency of the dust-chamber.

This installation is practically completed, but it will be some time before the results obtained can be accurate...
