

ISO 14184-2:1998, Textiles -- Determination of formaldehyde -- Part 2: Released formaldehyde (vapour absorption method)

This standard specifies a method for determining the amount of formaldehyde released under the conditions of accelerated storage from textiles in any form by means of a vapour absorption method. The procedure is intended for use in the range of releasable formaldehyde on the fabric between 20 mg/kg and 3500 mg/kg when determined by this method. The lower limit is 20 mg. Below this limit the result is reported as not-detectable. A method for determination of free formaldehyde and formaldehyde extracted partly through hydrolysis in aqueous solution is given in ISO 14184-1. This title may contain less than 24 pages of technical content.
