

# ISO/IEC ISP 10609-16:1998, Information technology - International Standardized Profiles TB, TC, TD and TE - Connection-mode Transport Service over ... Network Layer Security Protocol - Connecti

General ISO/IEC 10609 is applicable to End Systems concerned with operating in the Open Systems Interconnection (OSI) environment. It specifies a combination of OSI standards which collectively provide the connection-mode Transport Service using the connection-mode Network Service. This part of ISO/IEC 10609 specifies a security sub-profile for the provision of security services using cryptographic techniques with Network Layer Security Protocol connection-mode and no-header mode. Position within the Taxonomy The taxonomy of profiles is specified in ISO/IEC TR 10000-2. This part of ISO/IEC ISP 10609 supports security services for any TB, TC, TD or TE profile specified in ISO/IEC ISP 10609 (Connection-mode transport over connection-mode Network Service). Scenario End System Security Services The following security services are within the scope of this part of ISO/IEC ISP 10609: Peer entity authentication Connection confidentiality (optional) Security Mechanisms This part of ISO/IEC ISP 10609 provides no assurance as to the strength of the security mechanisms employed. This part of ISO/IEC ISP 10609 does not specify the cryptographic algorithms to be employed. This title may contain less than 24 pages of technical content.
