

ISO 11568-5:1998, Banking - Key management (retail) - Part 5: Key life cycle for public key cryptosystems

This part of ISO 11568 specifies for the retail banking environment the security requirements and the implementation methods for each step in the key life cycle for both the private key and the public key of an asymmetric key pair. It is applicable to any organization which is responsible for implementing techniques based on public key cryptosystems for the management of keys used to protect data. This title may contain less than 24 pages of technical content.
